Jugaad.py · Good Morning king

8 line Python: WhatsApp group mein sabse zyada message kisne bheje. Kuch install nahi.

```python
from collections import Counter
chat = open("group.txt", encoding="utf-8")
naam = []
for line in chat:
    if " - " in line and ": " in line:
        msg = line.split(" - ", 1)[1]
        naam.append(msg.split(": ")[0])
print(Counter(naam).most_common(3))
```

1. **Python install karo** (free): python.org → Downloads → Windows. Install ke time **"Add python.exe to PATH"** tick karo.
2. Zip ko **Extract** karo. Andar `group.txt` (2,000 practice message, naam kaalpanik) aur `counter.py` hai.
3. Extracted folder kholo, File Explorer ki address bar mein `cmd` likho, Enter.
4. Type karo: `python counter.py` → Enter. Dikhega: `[('Pyare Sir', 612), ('Sharma ji', 241), ('Golu', 198)]`
5. **Apna group (Android):** group kholo → ⋮ → More → **Export chat** → **Without media** → file apne laptop pe bhejo (mail/Drive). Zip aaye toh extract karo, .txt ka naam `group.txt` rakho, isi folder mein daalo, phir se chalao.

Samjho: export mein har message ek line: `01/11/25, 7:33 am - Pyare Sir: Good Morning 🌹`. `" - "` ke baad aur `": "` se pehle naam hota hai. Jin lines mein ye dono nahi (group ki notice, lambe message ki agli lines), woh gini nahi jaati. `Counter` har naam ki ginti karta hai, `most_common(3)` sabse zyada wale 3 deta hai.
Dhyaan: `encoding="utf-8"` zaroori hai (emoji ki wajah se). Naam wahi aata hai jo aapke phone mein save hai. iPhone ki line `[01/11/25, 7:33:10 AM] Naam: text` hoti hai: wahan `if "] " in line and ": " in line:` aur `msg = line.split("] ", 1)[1]` likho.

Try karo: (1) Pyare Sir wala: `most_common(1)` → sirf No. 1. (2) `most_common()` → sabki ginti. (3) Sabse zyada bola gaya shabd: naam ki jagah message ka text gino.
