

Data Structure with C Programming

Contents

- C Programming Revision - I
- C Programming Revision - II
- Searching
- Searching & Frequency Count
- Analysis of Searching Methods
- Hashing
- Sorting
- Sorting & Recursion
- Quicksort
- Structures
- Structures & Polynomials
- 2D Arrays
- Sparse Matrices
- Transpose of Sparse Matrices
- Addition of Sparse Matrices
- Multiplication of Sparse Matrices
- Storage
- Dynamic Memory Allocation
- Linked List
- Operations of Linked List - I
- Operations of Linked List - II
- Operations of Linked List - III
- Operations of Linked List - IV
- Circular Linked List
- Doubly Linked List
- Sparse Matrices as Linked List - I
- Sparse Matrices as Linked List - II
- Linked List Using Recursion
- Linked List Using Unions
- Generalized Linked List
- Stack
- Stack as a Linked List
- Stack and Expressions
- Stack Operations
- Postfix Evaluation
- Infix To Prefix
- Postfix To Prefix
- Postfix To Infix
- More Conversions
- Queues - I
- Queues - II
- Dequeue & Priority Queue
- Trees
- Tree Traversal
- BST - I
- BST - II
- Binary Tree
- Threaded Binary Tree
- Heap
- AVL & B-Trees
- Graphs
- Adjacency Multilist
- Depth First Search
- Breadth First Search
- Spanning Tree
- Dijkstra's Algorithm
- Memory Management - I
- Memory Management - II
- Garbage Collection
- File Organization
